

Signal Path Feasibility Fixture

Technical sample page 1 | identifier ADC-02

LEFT COLUMN

The receiver converts the input signal. The input signal is sampled at 48 kHz before the second stage.

RIGHT COLUMN

Figure 1. Vector signal path

Input	$x[n] = \sin(2\pi f t)$	Output
-------	-------------------------	--------

Table 1. Parameters

sample rate	48 kHz
-------------	--------

<https://example.invalid/signal-path>

Repeated footer: self-authored fixture

Русский текст проверяет embedded Cyrillic font.

Signal Path Feasibility Fixture

Technical sample page 2 | identifier ADC-02

LEFT COLUMN

The receiver converts the input signal to digital. The input signal is sampled at 48 kHz before the second stage.

RIGHT COLUMN

Figure 1. Vector signal path

Input	$x[n] = \sin(2\pi f t)$	Output
-------	-------------------------	--------

Table 1. Parameters

sample rate	48 kHz
-------------	--------

<https://example.invalid/signal-path>

Repeated footer: self-authored fixture
